Sections on Poster:

The Context

The “why” behind the project - what makes it so important?

This section should not be a generic explanation of trails. It should create the problem space:

- Trail systems are valuable recreational resources.
- Managers need to understand usage patterns.
- Manual counting/log books is expensive, inconsistent, and limited.
- Existing solutions may be unrealistic, difficult to deploy, or lack scalability.

Visually, maybe we put:

- Map of all potential deployment locations
- Statistics ("X visitors/year", "Y miles of trail", whatever else?)
    - Like with the presentation

The Mission

Break it down to the components, show how much we did

- Web and mobile platforms (GUI)
- Server
- device (and emulator)

The Challenges

- Communication and coordination (interdisciplinary) (inter-departmental)
- Refactoring (data model, architecture) and understanding the project/domain fully
- Requirements volatility
- Interns
- Supporting mobile devices
- Making it work for the MSD team who is returning in the fall
- Security and scalability of the application
- Extensibility and maintainability of the system

The Impact

- Allowing NYS DEC to make data-driven decisions with integrity for the effective management of the largest park in the continental US.
- A trail counting tool that could be used by other parks in the world

- Gives hikers in the Adirondacks a way to understand how busy a given trail is at any time.
- Installing devices and registering into system

The System Today

- Pictures
    - Computer showing it
    - Phone showing mobile layout
    - Heatmap on both devices
    - Device in a tree with an arrow pointing at the device and a big red circle for no reason, as well as a huge red arrow
- Process? metrics? Velocity?

Outside of these sections, we should get an image of the whole system working together.

Specifications

- Poster is 24" high x 36" wide (landscape mode)
- Top band across entire poster is reserved for the following common information:
    - PROJECT NAME (all caps, 1 - 2 inches or 70 - 140 points high) - note that the name on this website might be shortened, abbreviated, etc. Choose the name for the project that's most appropriate
    - Team name (optional)
    - Team members' names
    - Sponsoring Organization Name (this may be in the project name, so may not be needed here)
    - Sponsor contact's name(s)
    - Faculty coach's name
    - Senior Project - year
    - Logos toward the right side of the top band
        - RIT logo - Logos approved for student use
        - SE Department Logo (zip)
        - Sponsor logo - Ask sponsor for a high resolution version
    - The remaining area on the poster is available for you to tell your story
    - Top headers cannot be more than 25% of poster and may use darker background color
    - Background color needs to be light color and cover less than 75% of the page
    - You will need to place the following files into a .zip file, with a total size limit of 200mb

- Native original format, i.e. Illustrator, PowerPoint, Photoshop, etc.
- Full-size PDF
- Thumbnail (480w x 360h) .jpg file
- Full-size TIFF, if you can easily create it full size
