Nico starts reading
The Adirondack Park is the largest publicly protected area in the contiguous United States, larger than Yellowstone and the Grand Canyon combined. [V] Drone footage of the park

Previous teams have worked on a device that tracks trail usage data, [V] Just the device maybe slide show esque

And laid the groundwork for a web application to visualize data collected from devices across the Adirondacks. [V] Before version of the platform

Our team, The Trailblazers, built off this foundation to enhance and extend the web-application. [V] Transition to our project - landing page

The platform allows users to explore trail activity, view trends, and better understand how different areas are being used. [V] Click a trail head and “see trail data” and transition to the dashboard page

Richard starts reading

Users can filter and export trail data, [pause] view device status like battery levels and last updates, [pause] and analyze traffic patterns across different locations. [V] Show footage of users clicking the different filters, going to list view, clicking different trails in filters
This platform will be used by NY state officials to make data-driven policy decisions that affect trail maintainers and hikers in the Adirondacks, [V] Stock footage of board meeting

and could be extended to other parks across the country. [V] Zoom out to a map of the Adirondacks (google maps or earth), then zoom out to the country view of a bunch of parks across the US.

With this platform, we hope the Adirondack Park can remain accessible, preserved, and fun for future generations. [V] All of us walking on the trail, trevor trips and runs to catch up
